SHAIK AATIKA KULSUM

shaikaatika61@gmail.com | Bangalore, India | linkedin.com/in/shaik-aatika | github.com/Aatika18-hub

SUMMARY

Information Science undergraduate (CGPA 8.56) with hands-on experience across applied ML/computer-vision pipelines (TensorFlow Lite, YOLOv8), embedded/IoT systems, and distributed system design. Completed a one-month AI internship at CodeAlpha. Comfortable working across the full build cycle — data/model work, backend architecture, and deployment — with growing focus on applying AI/LLM tooling to build and ship products quickly.

EXPERIENCE

Artificial Intelligence Intern (Virtual) — CodeAlpha | 10 Sep 2026 – 10 Oct 2026

- Completed 3 assigned tasks during a one-month virtual AI internship, working on practical, applied ML projects.
- Awarded a **Certificate of Completion** and a **Letter of Recommendation** from CodeAlpha (Student ID: CA/DF1/270961), recognizing strong analytical skills and quick adaptation to emerging technologies.

PROJECTS

SmartBinX — IoT & AI-Based Smart Waste Classification System | smartbinx-dx5q.onrender.com

Arduino Uno, ESP32-CAM, TensorFlow Lite

- Led the AI/ML component of a 3-member team capstone project automating garbage segregation via a combined hardware + on-device inference pipeline.
- Trained a TensorFlow Lite model to classify waste into 2 classes (wet/dry) and ran inference directly on-device, removing dependence on constant cloud connectivity.
- Built the sensing and actuation pipeline (IR + HC-SR04 ultrasonic sensors, servo motors) to physically route waste based on model predictions.
- Built a web dashboard for Bangalore smart-bin monitoring with collector/admin views, interactive maps, and route optimization, driven by a simulated IoT data feed.
- Authored the full SRS, project report, and synopsis, aligning the deployment roadmap with the Swachh Bharat and Smart Cities Missions.

CookScan — AI-Powered Recipe Recommendation Web App | cookscan.vercel.app

Python, YOLOv8, Computer Vision

- Built an end-to-end computer-vision app that detects food ingredients from a live camera scan using a custom YOLOv8 model trained on 15 ingredient classes at 96% accuracy.
- Designed a recommendation engine mapping detected ingredients to recipes, reducing household food waste; deployed live on Vercel.

Campus Connect Hub — Unified Campus Management Platform

Web Development, Database Design (demo)

- Built a demo platform connecting students, lecturers, and administration, covering timetabling and per-student tracking of attendance, marks, and CGPA on a relational database backend.

Emotive World — Emotion-Responsive Gaming Platform

Python, Computer Vision

- Built a real-time facial-expression detection pipeline that recognizes 4 emotions (sad, angry, bored, excited) and adapts gameplay across 5 mini-games accordingly.

Portfolio Website

HTML, CSS, JavaScript

- Independently designed and shipped a responsive personal site showcasing projects, skills, and certifications; hosted on GitHub Pages.

RESEARCH & PUBLICATIONS

- **National Conference Paper** — "Design and Development of Multi-Purpose Low-Cost Mobile Robot," published in *Engineering the Future – The Vital Role of Science*.

CERTIFICATIONS & TRAINING

- **CodeAlpha AI Internship — Certificate of Completion & Letter of Recommendation** (Oct 2026)
- AI & Machine Learning — C-DAC
- Data Structures & Algorithms — Udemy
- SQL Fundamentals — Simplilearn
- Goldman Sachs Engineering Virtual Experience Program — Forage

TECHNICAL SKILLS

Languages: C, Java, Python, SQL

AI/ML & CV: Machine Learning, TensorFlow Lite, YOLOv8, OpenCV, Model Training & Deployment

Web & Data Viz: HTML, CSS, JavaScript, Power BI, Tableau

Tools & Platforms: Git, GitHub, MySQL, LaTeX, VS Code

CS Fundamentals & Soft Skills: DSA, DBMS, OOP, Team Collaboration, Technical Communication, Problem Solving, Team Leadership
